

COVER LETTER

I believe that I am a good fit for the job advertised. I know about 80% of the specifications of C++11. After fully completing it to 100%, I wish to move to design patterns. In all the jobs in which I am/was deployed, I have found out that I am more talented for the job assigned.

Most jobs advertise the requirement of Qt experience. Qt is just a framework. It can be learned within very much less time as compared to time required to learn latest version of C++. Dealing with ds and algo, is way more tougher than learning any programming language. Finally, ds and algo is just a part of computer science as a whole. I believe to have strong foundation in computer science as a whole.

Looking forward to hearing from Xylem.

Thanks and Regards.
