

COVER LETTER

Hi there. Curiosity is addiction, if not for all but for me and few other. From previous one(01) year, I am trying to eat all of c++ from site <https://en.cppreference.com/> but now understood that even experienced programmers don't remember all features and specifications. So paused my journey of "mastering C++" and started to look for a job. I hope this time, after sketching out the algo in my brain, I will not need to look at any book/site/material etc for the syntax of the language and can quickly convert the algo crafted in my mind into compilable/ (correctly executable) code in c++.

Understood and solved some dynamic_programming problems.

Currently studying java and design_patterns.

Thanks and regards
